

# Bias

DESIGN GECKELERMICHELS CRASSEVIG,ITALY

Bias is the result of a union of two shapes; an inclined cylinder and a thin, flat timber circle. Combining simple, clean lines with the angled base creates a dynamic effect. Skilled handcrafting of the Oak moulded plywood, without any visible joints, translates into a unique design aesthetic, which is also attributed to the open grain finishing that represents the simplicity of wood.

Bias is available in two sizes and can be used independently or nested together to create a visual display.
