

Slim Round

arco

DESIGN BERTJAN POT
ARCO, NETHERLANDS

The seemingly impossible Slim and Slim+ collection of tables are constructed using an innovative steel sandwich construction with a lightweight honeycomb-structure core. This unique composite material enables the table to be constructed at great lengths while retaining its slim line profile and remaining lightweight. The inherent properties of the different materials have been used as honestly as possible: metal for its strength and timber for its tactile and aesthetic qualities.

Slim+ is the larger version of the ultra-fine Slim table, designed to meet the demand for larger tables with fewer cumbersome legs or support systems. With a maximum length of no less than 3600mm, Slim+ makes an elegant dining or meeting table.

The Slim and Slim+ collection is available in a square, rectangular and round version.

LEADTIME

16–20 Weeks

WARRANTY

3 Year Structural
